## VERTICAL MOUNTING RAILS FOR SUN® EQUIPMENT

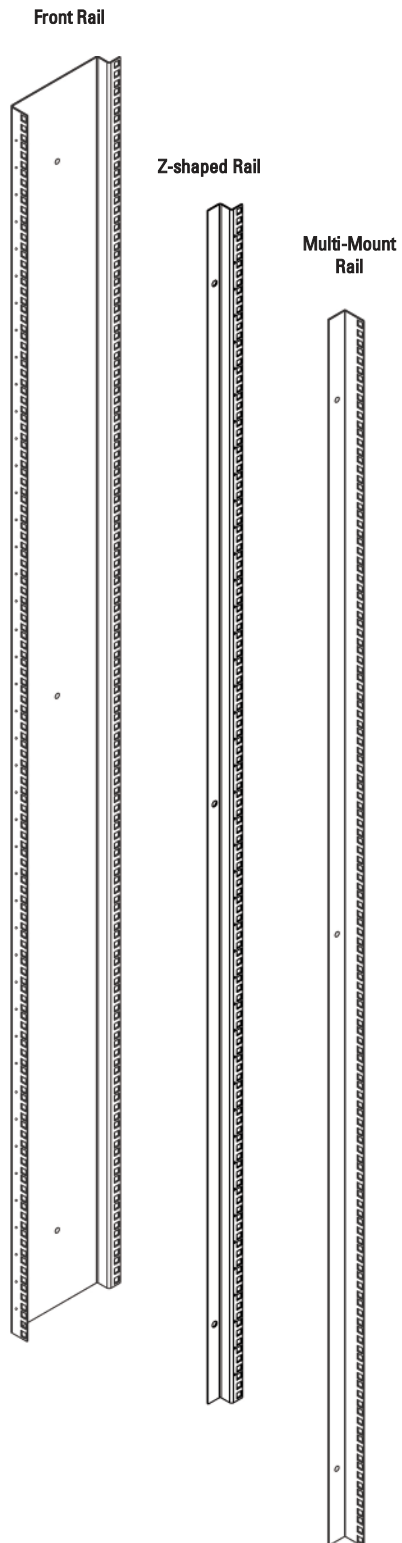

For use within the MegaFrame® M-Series and SlimFrame™ C-Series cabinet, this three-piece vertical mounting rail system delivers greater flexibility and maximum use of floor space by allowing a larger variety of servers to be mounted in 30" deep or deeper cabinets.

Series 11812 rails kit includes two front rails, two Z-shaped rails, two square-punched rails and package hardware. The design and shape of the rails allow the installation of Sun servers that have unique slid-mounting requirements. Rear square-punched rails allow 4-post mounted equipment requiring EIA-310-D standard mounting to be installed in a cabinet also containing Sun equipment. Series 11813 and 11815 Z-shaped rails kit can be used when mounting multiple Sun server of varying depths within the same cabinet. These kits include two Z-shaped rails and hardware. All mounting rails adjust from 24"-39".

- Design and shape of rails allow Sun servers to be side-mounted, where required
- Rear square-punched rails maximize available space for accessories and connectivity products in 36" or 39" deep cabinets
- RMU markings on rails simplify equipment installation
- Constructed of 14-gauge steel
